1. DATE - TIME GROUP 11 May 67 140250Z	2. LOCATION Fairborn, Ohio (2 Witnesses)
3. SOURCE Civilian	10. CONCLUSION Other (UNRELIABLE REPORT)
4. NUMBER OF OBJECTS One	
5. LENGTH OF OBSERVATION 15 Minutes	11. BRIEF SUMMARY AND ANALYSIS Observer sighted a bright red light low on the horizon in the SE. The sky was overcast and no stars could be seen because of the thick clouds. The object remained stationary and no noise was heard.
6. TYPE OF OBSERVATION Ground-Visual	
7. COURSE Stationary	COMMENTS: There are numerous red high rise warning lights in and near Fairborn because of the air traffic to W-P AFB. It seems probable that the observer was observing one of these lights. However on 24 Jan 68 the observer was telephoned to determine if she had continued to observe the light after having reported it to the O.D. The observer stated that she had seen so many UFO's that she didn't remember the report. The contents of the report as received by the O.D. was read to the witness but she still replied that she had seen so many that she couldn't remember the incident.

## EXPLANATION

ISOBARS are straight, horizontal brown lines. The heights in feet of the pressure surfaces in the ICAO Standard atmosphere are in parentheses ( ) below the pressure values on the left.

ISOTHERMS (°C) are the straight, equidistant brown lines running diagonally upward from left to right.

DRY ADIABATS are the slightly curved brown lines that intersect the 1000 mb. isobar at intervals of 2°C, and run diagonally upward from right to left.

SATURATED ADIABATS are the curved green lines that intersect the 1000 mb. isobar at intervals of 2°C, diverging upward and tending to become parallel to the dry adiabats. Values appear in the upper part of the diagram (515 mb. level).

SATURATION MIXING RATIO (in gm. per kg.) is represented by dashed green lines. The values appear at the bottom and middle of the diagram.

ICAO STANDARD ATMOSPHERE SOUNDING is indicated by a thick brown line.

The saturated adiabats and isopleths of saturation mixing ratio are computed by use of vapor pressure over a plane water surface at all temperatures.

APPROXIMATE VIRTUAL TEMPERATURE may be obtained from the formula  $T_v \approx T + \frac{w}{6}$  where  $T_v$  is virtual temperature in °C,  $T$  is free air temperature in °C, and  $w$  is mixing ratio in grams/kilogram. For purposes of thickness computation, use the mean temperature of the layer for  $T$  and use the mean mixing ratio of the layer for  $w$ .

Black dots • along wind scale lines indicate the levels for which wind data are reported and plotted. The open circles ○ indicate the mandatory pressure levels at which wind data are also entered.

[illegible]A 10x10 grid of 100 small, square, textured tiles. Each tile has a distinct, irregular, and somewhat crystalline or mineral-like texture. The tiles are arranged in a regular pattern, with some showing more detail than others due to lighting or focus. The overall appearance is that of a game board or a data matrix.

MEMO FOR THE RECORD

24 Jan 1968

Called Mrs. [REDACTED] regarding her 11 May 1967 sighting.

Mrs. [REDACTED] called the Duty Officer and stated that she had been observing a red light near the Horizon for about 15 min. I asked Mrs. [REDACTED] if she had continued to observe the object after having reported it., and if so how long had she observed it. Mrs. [REDACTED] replied that she has seen numerous UFO's and that she didn't recall this sighting at all. I then read the contents of the report to her to refresh her memory but after I had finished she repeated that she had seen so many that she still couldn't remember the sighting.
